INSTALLATION

This product is to be used with clean, fresh water. For different or corrosive liquids, contact GP Technical Service Department. With not clean liquids, appropriate filtration should be installed. Select the injector based on the nominal operating rating: system rated pressure, max flow and max temperature. Install valve with direction arrow pointing downstream. For proper operation a control device such as a dual lance wand, quick couple nozzles, or an adjustable nozzle holder must be used to lower the system pressure at the nozzle.

Under no circumstances should the pressure of the system exceed the maximum rated pressure of any component.

TROUBLESHOOTING

PROBLEM	CAUSE	SOLUTION		
Injector will not draw liquid	Incorrect nozzle	Check and change nozzle		
	System is not in low pressure mode	Change or adjust nozzle to put system in low pressure mode		
	Discharge hose is too long	Reduce length of discharge hose or change injector*		
	Chemical line is clogged	Clear chemical line of obstruction		
Rate of draw seems too slow	Discharge hose is too long Reduce length of discharge change injector*			
	Air leak in chemical line Chemical is too viscous	Locate and repair leak Reduce chemical with water to decrease its viscosity		
Chemical injector is leaking from hose barb	Obstruction in hose barb check valve	Disassemble and remove obstruction		
	Damaged o-ring in check valve	Remove and replace o-ring		
Excessive pressure load on pump, motor or engine	Clogged injector Improperly sized injector orifice	Clear injector orifice of obstruction Change orifice*
