GENERAL PUMP

A member of the Interpump Group

Triplex Plunger Pump, Total Start-Stop Feature

March 1, 2020 and later

FEATURES

- Total start-stop feature allows flow to activate electric motor
- Built-in unloader •
- Nickel-plated cast manifold manufactured • like heavy-duty pump line
- New generation seal package
- New dust protection chamber
- Solid ceramic plungers ٠
- New oversized plunger guide •
- New optimized inlet and outlet valves •
- New oil seal •
- Right side shaft, left side manifold

SPECIFICATIONS

Pump Model	ET1305E34UTS	ET1504E34UTS	ET1509E17UTS				
Max Volume	1.6 GPM 2.0 GPM		2.1 GPM				
Max Discharge Pressure	4,450 PSI	2,61	0 PSI				
Horsepower	4.9 EBHP	3.6 EBHP	4.9 EBHP				
Max Pump Speed	3400	RPM	1700 RPM				
Inlet Pressures		Flooded to 70 PSI					
Plunger Bore	.511 in./13 mm	.511 in./13 mm .591 in./15 mm					
Plunger Stroke	.197 in./5 mm	.157 in/4 mm	.370 in./9.4 mm				
Oil Capacity		8.5 oz.					
Max Fluid Temperature		165° F					
Inlet Port Thread		1/2"-10 BSP-F					
Discharge Port Thread		3/8"-13 BSP-F					
Shaft Diameter		5/8" Hollow					
Shaft Orientation		Right-hand					
Unloader Orientation		Left-hand					
Weight		11.0 lbs.					
Dimensions - Nominal	8" x 7.4" x 4.7"						

ET Series Total Start-Stop Feature

Instructions and Recommendations for the Installation of ET Series Pumps

Maximum temperature of the water through the pump is 165°F (73°C).

In order to obtain maximum performance in terms of duration of seals and valves, it is necessary to respect a few simple rules, as follows:

1) In order to avoid damage caused by cavitation, the pump must be pressure fed.

Note: Contact General Pump's technical sales department for guidance when operating the pump outside of the related inlet specs.

- The plumbing which feeds the pump must be of a diameter at least equal to the inlet port. Also, follow the suggestions below:
 - a) Make the plumbing as short and straight as possible, preferably in an upward direction to facilitate the expulsion of eventual air bubbles naturally if compatible with the requirements of the system.
 - b) It is always useful to put a filter at the inlet with capacity of 4 to 5 times the flow of the pump, for example for a 4 gpm (15 l/min) pump, put a filter from 16 to 20 gpm (60-75 l/mi)The mesh size suitable for this application is 0.016" (.4 mm).
 - c) It is extremely important to put a pressure switch on the suction port of the pump, and in any case downstream from the filter, so that it can stop the pump should the feed pressure drop by 20% due to the filter clogging or failure of the feed pump, etc.

3) Change of oil

We recommend the *first oil change after the first 50 hours*, with the *pump stopped* and the *oil still warm*.

This change is not recommended because the oil has lost its properties, but rather to eliminate the impurities that have gotten into the oil during the running-in phase. If these impurities are not removed, but are allowed to remain in the oil, they *may cause premature wear* to the moving parts and the oil seals. After this initial change, the oil can then be changed every three months or 300 hours of operation thereafter.

Please note: If the pump works in conditions with high humidity and with sharp temperature changes, it is possible that condensation will appear inside the crankcase, which mixing with the oil can change its properties. This is easy to see because the oil changes to a white, milky color.

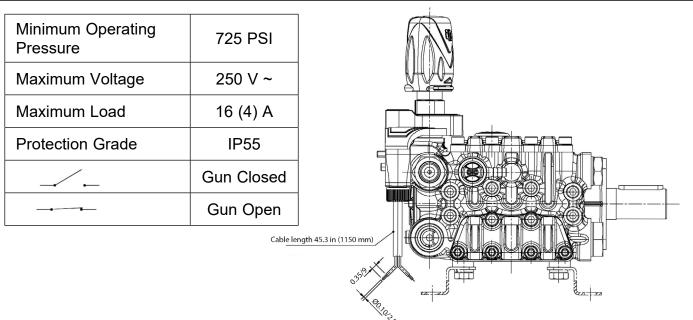

If the pump does not have excessive water leaking from the packings, and the oil becomes milky, the oil has to be changed more frequently. The percentage of water in the oil must not exceed 20%.

CHART OF COMPATIBLE OILS					
General Pump	Series 100				
BP	VISCO 2000				
CASTROL	CWX				
MOBIL	SUPER				
SHELL	HELIX SUPER				
TOTAL	QUARTZ 4000-5000				

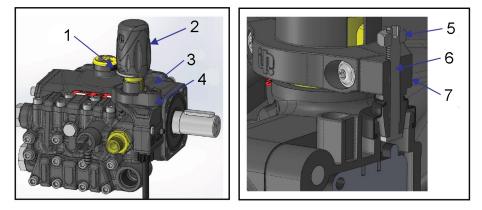

Use oil per the following chart:

OPERATIONAL SPECIFICATIONS

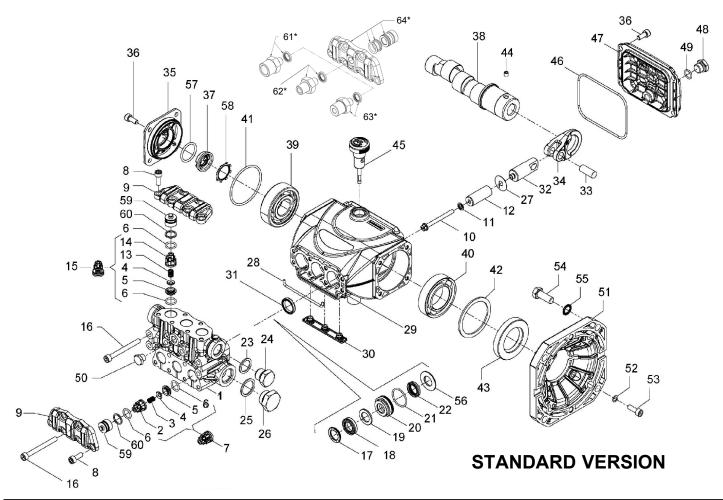

START-STOP MICROSWITCH SET-UP

- 1. Make sure the system is turned off.
- 2. Open the gun to release the pressures trapped into the system.
- 3. Make sure the valve adjustment spring is compressed, if not, turn clockwise 6/7 turns the knob 2 to preload the valve adjustment spring.
- 4. Remove the holding fork 1 and the knob 2
- 5. Unscrew the screw 4 and remove the cover 3.
- 6. Loose the nut 5 (hex.7), holding the Start-Stop adjustment screw, 6 with hex male tool (hex. 2).
- 7. Unscrew the Start-Stop adjustment screw 6 up to the stop on the control jaw 7.
- 8. Make sure again that the valve spring is compressed (item 20).
- 9. Turn on the system (the engine must not start).
- 10. Tighten the Start-Sop adjustment screw 6 until the engine starts.
- 11. Once started, the engine will stop in short time since the gun is closed.
- 12. At this point make a complete clockwise turn of the Start-Stop adjustment screw 6.
- 13. Holding the Start-Stop adjustment screw, 6 gently tighten the nut 5 on the control jaw 7.
- 14. Make some gun openings in order to check the correct operation of the Start-Stop.
- 15. Fit the cover 3 and the screw 4.
- 16. Install the knob 2 and the holding fork 1.

DIMENSIONS

WARNING: High Pressure Systems require a primary pressure regulating device (i.e. regulator, unloader) and a secondary pressure relief device (i.e. pop-off valve, relief valve). Failure to install such relief devices properly could result in personal injury or damage to pump or property. GP does not assume any liability or responsibility for the operation of the user's high pressure system.

WARNING: This product can expose you to chemicals including lead, which is know to the state of California to cause cancer and birth defects or other reproductive harm. For more information, go to www.P65Warnings.ca.gov
